

No. of Functional Features Included in the Solution

Date	29 September 2026
Team ID	SWTID-2026-6203
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value

Functional Features Overview:

This document lists the functional features included in the project solution. Each feature describes its purpose and contribution to the overall solution.

S.No	Feature Name	Feature Description	Module / Component	Status	Marks Contribution
1	User Creation	Create a test user for accessing and testing ServiceNow records.	User Administration	Done	—
2	Role Creation & Assignment	Create custom roles bb1, bb2, bb3, bb4 and assign them to the test user.	User Administration / Roles	Done	—
3	Custom Table Creation	Create the Institution Details custom table for storing student information.	Database / Table	Done	—
4	Field Creation	Add Student Roll Number, Student Name, Faculty Name, Branch, Email, Phone Number and Description.	Database / Fields	Done	—
5	Read ACL	Restrict record viewing based on the EEE branch and user role.	Security / Read ACL	Done	—
6	Create ACL	Control who can create new records using the bb2 role.	Security / Create ACL	Done	—
7	Write ACL	Control who can edit records using the bb3 role.	Security / Write ACL	Done	—
8	Delete ACL	Control who can delete records using the bb4 role.	Security / Delete ACL	Done	—

Feature Summary:

Metric	Count / Value
Total Features Planned	8
Total Features Implemented	8
Core / Must-Have Features	8
Additional / Nice-to-Have Features	0
Features Tested & Verified	8

Feature Category Breakdown:

S.No	Category	Features in Category	Example Features
1	User Interface (UI)	1	User and record access through ServiceNow forms/lists
2	Backend / Logic	4	Script-controlled Read, Create, Write and Delete ACLs
3	Database / Storage	2	Institution Details table and its fields
4	API / Integration	0	Not included in the project
5	Security / Authentication	1	Role-based and field-based record access control

Project Outcome:

The solution demonstrates how script-controlled READ, WRITE, CREATE, and DELETE ACLs enforce record-level security by evaluating user roles and record field values, helping prevent unauthorized viewing, modification, creation, and deletion.
