

Solution Architecture

Date	30.9.2026
Team ID	SWTID-2026-6203
Project Name	Script Controlled ACL – Restrict Record Access Based on Field Value

Solution Architecture Diagram:

The solution follows a layered security architecture. A user request reaches the application, the ACL checks the requested operation, and a scripted condition evaluates a specified field value before allowing or denying access to the record.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides the interface for users to open and interact with records.	ServiceNow UI, Forms, Lists
Application / Request Layer	Receives the user's request and sends it through platform security checks.	ServiceNow Platform
ACL Security Layer	Checks whether the user is permitted to perform the requested operation.	ACL, Roles, Conditions
Script Controlled ACL	Runs a script to evaluate the required field value and returns an allow or deny decision.	ACL Script, JavaScript, Glide APIs
Data / Record Layer	Stores protected records and returns them only after authorization succeeds.	ServiceNow Tables, Records, GlideRecord
