

Performance Testing

Date	30 September 2026
Team ID	SWTID-2026-6203
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value

Performance Testing

Performance testing evaluates the behavior of the Script-Controlled ACL solution during record access and record operations. The testing focuses on the Institution Details table and the configured READ, CREATE, WRITE and DELETE ACLs.

Step 1: Testing Overview

Field	Details
Testing Tool Used	ServiceNow instance / ACL verification
Type of Testing	Access-control and record-operation testing
Target Module / API	u_institution_details table and Script-Controlled ACLs
Test Environment	ServiceNow instance
Test Date	28 September 2026

Step 2: Test Scenarios

S.No	Test Scenario Description	No. of Virtual Users	Duration (min)	Expected Outcome
1	READ ACL – Impersonate a user with bb1 and open the Institution Details list.	1	15	User can view the permitted EEE branch records.
2	CREATE ACL – User with bb2 attempts to create a new record.	1	15	User can create a record according to the configured Create ACL.
3	WRITE ACL – User with bb3 attempts to edit an EEE record.	1	15	User can edit the permitted record.
4	DELETE ACL – User with bb4 attempts to delete an EEE record.	1	15	User can delete the permitted record.

Step 3: Observations & Analysis

Key Findings
The provided ServiceNow screenshots show configured READ, CREATE, WRITE and DELETE Access Control rules for the u_institution_details table with roles bb1, bb2, bb3 and bb4 respectively.
Bottlenecks Identified
No performance bottleneck can be concluded from the ACL configuration screenshots alone.
Optimization Steps Taken
No performance optimization is claimed from the provided screenshots.

Advanced

☒

Conditions

Access Control Rules have two decision types, and these types will behave differently depending on conditions.
1. Allow Access: Allows access to a resource if all conditions are met. Additional ACLs may grant access to records where this ACL has not granted access.
2. Deny Access: Denies access to a resource unless all conditions are met. Additional ACLs may not grant access to records where this ACL has denied access.
