

## DEMONSTRATION OF PROPOSED FEATURES

|               |                                                                     |
|---------------|---------------------------------------------------------------------|
| Team ID:      | SWTID-2026-6203                                                     |
| Project Name: | Script-Controlled ACL – Restrict Record Access Based on Field Value |

### Demonstration of Proposed Features

| S.No | Feature Name                   | Description                                                                                                    | Status       | Demonstrated Remarks                                                                                                    |
|------|--------------------------------|----------------------------------------------------------------------------------------------------------------|--------------|-------------------------------------------------------------------------------------------------------------------------|
| 1    | User & Role Creation           | Creates a test user and custom roles (bb1, bb2, bb3, and bb4) for access control.                              | Configured   | EEE User is created and assigned the custom roles for ACL testing.                                                      |
| 2    | Institution Details Table      | Creates the custom table u_institution_details with student, faculty, branch, contact, and description fields. | Configured   | The table includes a Branch choice field with ECE, EEE, and CSE options.                                                |
| 3    | READ ACL – Branch-Based Access | Restricts record reading based on the configured ACL, role, and branch condition.                              | Configured   | Users with bb1 can access the permitted EEE branch records; users without the role are denied. Admin access is allowed. |
| 4    | CREATE ACL – Record Creation   | Controls who can create new records in the Institution Details table.                                          | Configured   | The CREATE ACL requires the bb2 role; creation is tested along with the applicable access requirements.                 |
| 5    | WRITE ACL – Record Editing     | Controls who can modify existing records in the Institution Details table.                                     | Configured   | The WRITE ACL requires bb3; authorized users can edit permitted records when the other access requirements are met.     |
| 6    | DELETE ACL – Record Deletion   | Controls who can delete records from the Institution Details table.                                            | Configured   | The DELETE ACL requires bb4; deletion is tested for users who have the required access.                                 |
| 7    | End-to-End ACL Verification    | Checks record access and available actions for users with different role combinations.                         | Verification | Validate READ, CREATE, WRITE, and DELETE behavior using test users and an admin account.                                |
